

ACTIVATEUR SCALPIK 12S

ADDITIVE PRODUCT FOR BATH OF SCALPIK L 12 S

PACKAGING :

- Water bottles 20l Blue dark HD approved UN
- Shell 200l Dark Blue HDPE approved UN
- IBC 1000l Translucent HDPE containers approved UN

AREAS OF APPLICATION

Chlorinated strippers evaporate during use. This evaporation is a function of the following elements:

- Frequency of use
- Bath contact surface with air
- Bath temperature

These factors therefore contribute to a decrease in the cleaning power of the bath.

ACTIVATOR SCALPIK L 12 S is specially designed to remedy this problem. ACTIVATOR SCALPIK L 12 S does not have a cleaning power all by itself but must always be added to the bath of SCALPIK L 12 S as soon as the reduction of the cleaning power of the latter is observed.

APPLICATION

PROCEDURE: Pour ACTIVATEUR PIK L 12 S into the pickling tank already containing SCALPIK L 12 S. Homogenize as much as possible. The bath is ready for use. The dose to be added varies depending on the bath condition. It can vary from 10 to 30% relative to the total weight of the product to be adjusted. Note: If the bath contains a large amount of sludge (denatured paint), it may be necessary to filter it before performing the assay.

STORAGE :

- Minimum storage temperature: + 10 ° C
- Max storage temperature: + 20 ° C

Store in tightly closed containers, away from air and light. If the product is not used within 12 months from the date of manufacture but storage conditions
